Microbiome Daily Relative Abundance

```
# make ggplot bar chart of top 10 most abundant species per day  
#melt subtaxasp to get our dataframe in the long format for future usage  
meltdf<- melt(subtaxasp)
```

```
## Warning in melt.data.table(subtaxasp): To be consistent with reshape2's  
## melt, id.vars and measure.vars are internally guessed when both are 'NULL'.  
## All non-numeric/integer/logical type columns are considered id.vars, which  
## in this case are columns [rn]. Consider providing at least one of 'id' or  
## 'measure' vars in future.
```

```
#merge to get access to Day var  
mergedf<- merge(x=meltdf, y=map, by.x = "variable", by.y= "X.SampleID", all.x=TRUE)  
  
#convert our dataframe species (rn) column to a character  
mergedf$rn <- as.character(mergedf$rn)  
  
#series of gsub commands meant to neaten and clarify legend content  
mergedf$rn <- gsub(".*s__", "", mergedf$rn)  
mergedf$rn <- gsub("\\\\[", "",mergedf$rn)
```

```
mergedf$rn <- gsub("\\\\", "",mergedf$rn)
mergedf$rn <- gsub("_", " ",mergedf$rn)

#create <10% abundance category
mergedf$rn[mergedf$value < 0.1] <- "<10% abundance"
